

Page 6 – Useful Methods of Wrapper Classes

valueOf()

Static method. Returns Wrapper Object. Example: `Integer.valueOf("100")`

parseXxx()

Static method. Returns primitive. Example: `Integer.parseInt("100")`

xxxValue()

Instance method. Wrapper → Primitive.

Interview

valueOf() returns object; parseInt() returns primitive.

Page 7 – Access Modifiers

Definition

private, default, protected, public.

Outer Class

Only public or default.

Inner Class

Can use all four access modifiers.

Page 8 – Rules for Public Classes

Rules

One public class per file. File name must match public class. Only public classes are directly accessible outside the package.

Page 9 – Instance Initialization Block

Definition

Runs for every object before constructor.

Execution Order

Object Creation → Instance Block → Constructor.

Page 10 – Static Initialization Block

Definition

Runs only once when class is loaded.

Instance	Static
----------	--------

Every object	Once
Before constructor	On class loading
Uses this/super	Cannot
Instance+Static	Only Static

Execution Order

Static Block → Instance Block → Constructor.
